BACKEND DEVELOPER

April 2019- Present

Client – Leading Healthcare Service Company in US

CRM(Customer Relation Management) where CSR role will manage the call center management for inbound and outbound calls. This project is for redesign and development as the existing project was a monolithic application.

Contribution:

- Developed tested and deployed APIs.
- written and implemented code for automating RDP and ACL creation in solace on microservice deployments.
- responsible for maintaining and deploying the changes in APIGEE proxies
- developing the code for a given requirement with minimal bug counts and delivering the assigned work within the time duration.
- worked on improving code quality by using Sonar lint to verify and resolve the issues and also wrote Unit tests using Junit to ensure the quality and coverage of code.
- Building and deploying Project using AWS code commit, Spinnaker and PCF
- Handling APIGEE changes and deploying through Jenkins.
- interaction with clients for requirement discussions

FULLSTACK DEVELOPER

Feb 2019- April 2019

Cooperatively-owned wholesale Bank in US

EDC (Enterprise Data Catalog is designed and developed in order to provide Data Analysts a one stop solution for finding, fetching and doing all other operations.

Contribution:

- Worked on loading data from ETL data given by client to oracle database created for the project using batch jobs which triggers automatically at a certain time interval.
- Loading data to elastic search from oracle database for fast fetching of records using batch jobs.
- worked on promoting code to higher environments like production.
- writing code which restricts/allows certain users from accessing, creating, editing, and deleting content from the application.
- Performing data clean ups and adding users to the application using LDAP sync using batch jobs.
- worked on UI enhancements.
